

Industry Uses:

- Aerospace
- Automotive
- Heavy Machinery

Technical Advantages

- Provides slick surface, reducing the coefficient of friction
- Reduces galling
- Improves lubricity, non-stick surface
- Excellent corrosion resistance
- Improves life expectancy for metal surfaces in applications of extreme wear

TM Diamoforce Engineered Chrome

Diamoforce is one of Techmetals' latest additions to our chrome alloy plating technologies. This coating offers parts an extreme hardness and amazing wear resistance. With a slick surface that reduces the coefficient of friction, Diamoforce reduces galling, while also increasing a part's lubricity.

Comprised of a unique nodular structure, this engineered chrome finish is known for its excellent wear characteristics –greatly extending the life expectancy of metal surfaces subject to “extreme stress” and wear.

Diamoforce has outperformed standard chrome and other chrome processes in longevity for many applications.
